

NATHANIEL WETZEL

wetzel.na@northeastern.edu ◇ [linkedin/nnwetzel](#) ◇ [github/nnwetzel](#)

EDUCATION

Northeastern University

Boston, MA

Bachelor of Science in Computer Science

Grad Date: May 2027 | GPA: 3.7/4.0

Coursework Algorithms & Data, Object-Oriented Design, Fundamentals of Software Engineering, Computer Systems, Machine Learning & Data Mining, Databases, Computer Vision

Honors Amazon Future Engineer, Elks Most Valuable Student, Dean's List

EXPERIENCE

Zoox

Jun. 2026 – Sep. 2026

Software Engineer Intern

Foster City, CA

- Engineered a standardized self-service pipeline used org-wide to provision AWS EC2 and VMware hosts.
- Automated Terraform provisioning via Spacelift and IP/DNS allocation via BloxOne, deployed to Kubernetes.
- Integrated Jira, Slack, and vCenter to automate ticket lifecycle, PR review, and deployment status tracking.

Amazon

Jun. 2025 – Sep. 2025

Software Engineer Intern

Seattle, WA

- Developed a Java service validating **10M+ transactions/month** at Amazon's receivables API endpoint.
- Eliminated invalid custom billing attributes ensuring accuracy at scale across billions of dollars in billing.
- Designed a config framework for onboarding new attributes, replacing code deployments with config changes.
- Improved validation performance by **60%** with config retrieval integration and runtime caching of attributes.

Wolters Kluwer

Jan. 2025 – Jun. 2025

Software Engineer Intern

Boston, MA

- Migrated a clinical NLP dosing app to a Python microservice on AKS, accelerating clinical feature releases.
- Containerized the service with Docker, processing high volumes of dosing data and reducing deployment time.
- Orchestrated remediation for **500+ Linux hosts** by developing a patching tool with Ansible and Jenkins.

Amazon

May 2024 – Aug. 2024

Software Engineer Intern

Seattle, WA

- Implemented a Java metric aggregation service ensuring timely invoice delivery for **100K+ invoices/month**.
- Engineered an AWS Lambda in Java to automate Elasticsearch metric propagation into CloudWatch.
- Deployed an IaC module with AWS CDK to provision services in VPC, leveraging Dagger for dependencies.

PROJECTS

NDVI Compare

Apr. 2025 – Jun. 2025

- Engineered a FastAPI backend to detect deforestation from satellite imagery via Google Earth Engine.
- Processed multi-temporal satellite data, **flagging hundreds of thousands** of acres of vegetation change.
- Built a dashboard and reporting layer, cutting time to review flagged deforestation sites from hours to minutes.

TECHNICAL SKILLS

Languages Java, Python, C/C++, R, TypeScript/JavaScript, SQL

Technologies Git, Linux, Docker, Kubernetes, VMware, Terraform, Spacelift, Ansible, Jenkins, AWS

Concepts Backend Development, Fullstack, API Development, Distributed Systems, Data Pipelines, Machine Learning, Cloud Computing, DevOps, CI/CD Pipelines, Infrastructure as Code
